Taarun Dev Karthikeyan

Senior Software Engineer · Java & Angular Full-Stack · Enterprise Systems
Ottawa, ON, Canada | imtaarun@gmail.com | linkedin.com/in/taarun-dev

SUMMARY

Full-stack engineer with 6+ years delivering enterprise systems in Java and Spring Boot with Angular and TypeScript front ends. Builds and consumes REST APIs over relational and NoSQL data, works across ORM and SQL layers, and owns modules end to end from design document to production. Spent 3+ years delivering a global aviation platform directly for an enterprise client, and now builds multi-tenant SaaS infrastructure at Asigra.

LANGUAGES & TECHNOLOGIES

Backend: Java 17, Spring Boot, Spring Security, Hibernate/JPA, jOOQ, Vert.x, Dagger, Node.js/Express, REST API design, microservices
Frontend: Angular, TypeScript, JavaScript, HTML, CSS, Cypress
Databases & SQL: PostgreSQL, MySQL, SQL query optimization, MongoDB, Cassandra, RocksDB, SQLite, Elasticsearch/ELK
Cloud & Platform: AWS (Lambda, SAM, Batch, ECR, CloudWatch), Docker, Kubernetes, multi-tenant SaaS, OAuth 2.0, distributed locking, Azure (AZ-204)
Integrations: Microsoft Graph, SharePoint REST, HubSpot, Box, QuickBooks, CData JDBC
Testing & Build: JUnit, Mockito, TestNG, Cypress, SonarQube, Maven, Gradle, Git, Jenkins
Other languages: Go, Python

EXPERIENCE

Asigra SaaSAssure — Senior Software Engineer Ottawa, ON · Oct 2025 – Present

- Build and maintain data connectors (SharePoint, Box, HubSpot, Exchange) as Java 17 microservices on Vert.x and Dagger, consuming third-party REST APIs and deployed through AWS Lambda/SAM across a multi-account AWS organization.
- Design and ship backup, restore, and export strategies for complex multi-tenant SaaS object graphs — dependency-ordered restores, incremental backup, and association and line-item relationships that survive round trips through external APIs.
- Led storage and authentication work in the shared connector SDK: built an embedded disk-backed store on RocksDB that kept memory flat on very large backup sets, and redesigned OAuth 2.0 token handling so refresh is safe across concurrently running instances.
- Develop the vault storage service in Go that stores and serves tenant credentials and secrets to connector instances at runtime.
- Diagnose production failures from live logs across multi-tenant, multi-threaded runs, documenting root causes so fixes hold.

Nanometrics Inc. — Software Engineer Ottawa, ON · Sep 2023 – Sep 2025

- Built dynamic Angular front ends over backend REST services, and integrated RESTful APIs with Node.js/Express, owning features across the full stack from UI through persistence.
- Owned key application modules end to end, architecture through deployment, as the primary engineer on the work.
- Delivered a cloud-native migration to AWS with zero downtime, improving availability and fault tolerance.
- Developed firmware end to end that connects to multiple sensors concurrently and converts their data streams to TCP for downstream ingestion.
- Cut query execution times up to 40% by optimizing database queries and schema design.
- Reduced test execution time 40% while increasing coverage by building automated testing frameworks in JUnit and Cypress.

LTIMindtree — SITA BagJourney platform Bengaluru, India · Oct 2018 – Mar 2022

Senior Software Engineer Apr 2020 – Mar 2022

Software Engineer Jan 2019 – Apr 2020

- Delivered a global aviation baggage-tracking platform for SITA as the client, working directly with client stakeholders on requirements, design review, and release.
- Improved application performance 25% as lead developer by redesigning backend microservices and user-story design.
- Cut system latency 30%, defects 40%, and resource consumption 20% by refactoring legacy code and system flows.
- Replaced the security stack with Spring Security and closed out vulnerabilities in the statistics module.
- Authored high- and low-level design documentation for exposed REST APIs, and sped debugging 50% by configuring the ELK stack for real-time log monitoring.
- Trainee (Oct 2018 – Jan 2019): Java full-stack program — Spring Boot, Hibernate/JPA, Angular, Azure; promoted into the SITA BagJourney team.

CERTIFICATIONS

Microsoft Azure Developer Associate (AZ-204) · DevOps Practitioner · AWS Fundamentals: Going Cloud-Native · Secure Delivery for Java Developers

EDUCATION

University of Windsor — MEng, Electrical & Computer Engineering 2022 – 2023
Anna University, Chennai — BE, Electronics & Communications Engineering 2014 – 2018
